Jung’s theory of psychological types is perhaps the most influential creation in personality typology. One of the reasons behind such a lengthy introduction is that we want to make it clear that there is no single definition assigned to these type acronyms – each theory defines them in their own way and it is entirely possible that if you meet five people who all say “I am ...”

Introduction to the Theory of Differential Inclusions. A differential inclusion is a relation of the form $x \in F(x)$, where $F$ is a set-valued map associating any point $x \in \mathbb{R}^n$ with a set $F(x) \subseteq \mathbb{R}^n$. As such, the notion of a differential inclusion generalizes the notion of an ordinary differential equation of the form $x' = f(x)$.
